

# TP5 : Gestionnaire d'actions

## 1. Introduction :

The Online Event Management System is designed as a centralized platform for members of a charitable association to efficiently manage their charitable actions and events. The primary aim of this application is to provide association members with tools to organize, track, and execute their charitable endeavors seamlessly.

## 2. Architecture :

### Components:

The application architecture consists of several key components: **Add-Post-Form:** Component responsible for adding new posts.

**Header:** Navigation component for user-friendly interface.

**Landing-Page:** Initial landing page for association members.

**Action:** Component responsible for managing individual charitable actions.

**Action-List:** Component displaying a comprehensive list of all available actions.

### Models:

The Action Model defines the structure and attributes of charitable actions within the system.

### Services:

The Action-Service serves as an interface between the components, managing functionalities like addition, deletion, and status update of actions.

## 3. Functionality and Features:

Key functionalities and features of the Online Event Management System include:

**Add or Delete Action:** Capability for members to add new charitable actions or remove existing ones..

**Mark Action as Successful:** Feature allowing members to indicate the successful completion of an action.

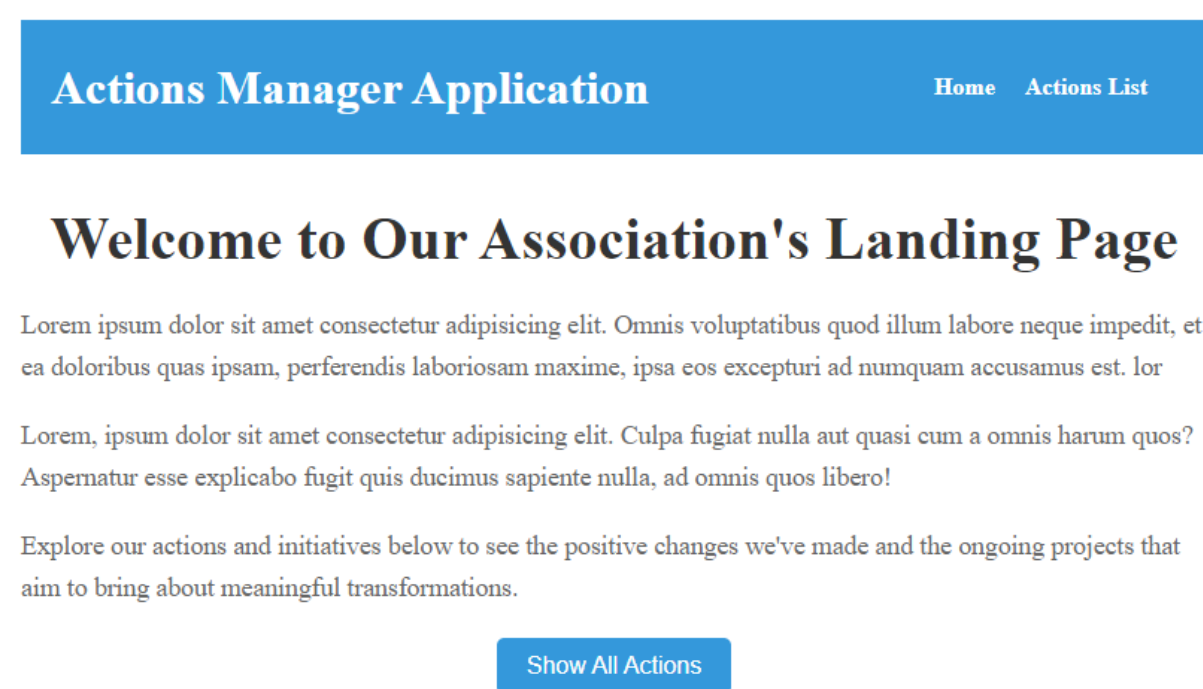

**Display Actions:** Presenting a comprehensive list of all registered charitable actions or events.

## 4. User Interface (UI):

The UI design of the application is minimalistic yet functional, focusing on simplicity and usability for association members.
